

Technology for Nanosystems, Bioengineering and Energy - Special prizes

- **Criteria and weighting**

- 1) Points for publications in indexed journals. Scores are obtained using a normalised impact factor calculated as the quotient between the corresponding JCR impact factor (or the latest available) divided by the added impact factor of the category in which the journal is included. For journals listed in more than one category, the highest impact factor will be chosen. Finally, if the candidate is not the first author of the contribution, the previous highest normalised score will be reduced to 50%.
- 2) Points for patents: a) Spanish patent application 0.5 points, b) Spanish patent awarded 1 point, c) PCT application 1 point, d) PCT awarded 2 points.
- 3) Books and book chapters published by renowned publishers according to the Academic Committee: a) book chapters 1 point, b) whole books 3 points. If the candidate is not the first author, a 50 % reduction is applied.
- 4) Presentations at conferences, up to 2.25 points:
 - a) Oral presentations by the candidate at conferences with the candidate listed as the first author.
 - i) International conferences: 0.5 points each up to 1.5 points (max. 3 presentations).
 - ii) Spanish conferences and Graduate Students' Meetings: 0.25 points each up to 0.75 points (max. 3 presentations).
 - b) Other presentations at conferences not listed in section 4.a: 0.1 points each.
- 5) If two candidates are tied, the academic committee will establish other criteria.
 - a) Number of articles as first author in indexed journals and that appear in the first decile of one of the categories.
 - b) If the candidates are still tied after applying criterion 5.a, the academic committee will take into account the number of articles as first author in indexed journals and that appear in the first quartile of one of the categories.
 - c) If the candidates are still tied after applying criterion 5.b, the academic committee will take into account the number of articles as first author in indexed journals and that appear in the second quartile of one of the categories.
 - d) If the candidates are still tied after applying criterion 5.c, the academic committee will take into account the number of articles as first author in indexed journals and that appear in the third quartile of one of the categories.

- **Required complementary documentation**

1. DAD of the candidate.
2. List of publications deriving from the thesis: articles, patents, books and book chapters, conference presentations with certificates of attendance and proof of type of presentation (oral or poster), etc. As far as possible each item on the list must be accompanied by its DOI and the following quality indicators: impact factor, citations, reports, etc., particularly if these indicators were not originally included in the DAD.
